MI M 0101 17 / A541E	ALGEBRA 2	English	BA	Winter	5	45	15	0	Prof. Azniv Kasparian, PhD	<a href="mailto:kasparia@fmi.uni-sofia.bg">kasparia@fmi.uni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

The course is an introduction to Galois theory. After studying separable field extensions it introduces the Galois group and traces out its interrelations with the structure of the corresponding field extension. It discusses the Galois correspondence between the subgroups of the Galois group and their associated fixed fields with a specific emphasis on the bijective correspondence between the finite solvable Galois groups and the finite radical extensions of a given field. Few of the intended applications are the Abel-Ruffini's Theorem on the insolvability of polynomial equations of degree at least 5 by radicals, some counterexamples to classic compass and straightedge constructions, the correspondence between the unratified coverings of a topological space and the subgroups of its fundamental group, as well as the correspondence between the finite ramified extensions of Riemann surfaces and the finite extensions of their function fields.

**Requirements for enrollment: YES/NO**

**If any, please describe the specific requirements: Basics on groups, rings and polynomials**

**Short description of the course (in the language of instruction):**

The course studies the Groebner bases. It discusses the monomial orderings, the division of polynomials of several variables, and affine algebraic varieties. As a first application of Groebner bases, the proof of Hilbert's Basis Theorem is derived from Dickson's Lemma. The course focuses on the reduced Groebner bases and Buchberger's algorithm for their construction. Applications to elimination and extension on affine varieties are under consideration. Hilbert's Nullstellensatz is used for building the correspondence between the polynomial ideals and the affine varieties. Thus, algorithmic computations in quotients of the polynomial rings are related to the regular and rational functions on affine varieties. Applications to robotics and automatic geometric theorem proving are intended. Eventually, the course includes also the projective varieties.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: The listeners are supposed to be familiar with the obligatory bachelor's courses in algebra and calculus. Some knowledge of algebraic geometry is an asset.

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail
						Lectures	Seminars	Practical work		
MI M 0101 16 / A731E	APPLIED ALGEBRAIC GEOMETRY	English	BA/MA	Winter	5	45	0	15	Prof. Azniv Kasparian, PhD	<a href="mailto:kasparia@fmi.uni-sofia.bg">kasparia@fmi.u ni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course is an introduction to arithmetic algebraic geometry with an application to coding theory. It starts with function fields of one variable, Galois actions on their constant fields, discrete valuations and places. By the time when the geometry comes in, there is a fair amount of abstract algebraic knowledge, to assess the correspondence between algebraic curves and their function fields. After the basics for smooth algebraic curves, their regular and rational maps, the course proceeds with Riemann-Roch Theorem. It is proved from adelic viewpoint. The usual differential forms are also introduced, discussed and related to the duals of the adelic spaces, called Weil differentials. A milestone of the subject is Hasse-Weil Theorem and the Hasse-Weil bound on the number of the rational points of a curve over a finite field. Their proofs, combining a variety of ideas and techniques, deserve to be a goal itself. The aforementioned theoretic considerations are applied for constructing dual algebrogeometric codes. A special attention will be paid to decoding algorithms for codes of residuums, which are based on the properties of the linear systems of divisors. The course is recommended to students with interdisciplinary mathematical interests. The simultaneous invitation to algebraic geometry and Galois Theory is hoped to enhance both, the geometric intuition and the rigorous thinking.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: The students are supposed to be familiar with the obligatory bachelor's courses in algebra and calculus.

Short description of the course (in the language of instruction):

The course is a solid introduction to the Zermelo-Fraenkel axiomatic set theory (ZFs) as an underlying framework for mathematics. Its aim is to acquaint the students with the ordinal and cardinal arithmetic and the role of the axiom of choice in mathematics. We shall study in detail the transfinite recursion theorem, many equivalents of the axiom of choice, their applications in mathematics and weaker forms of the axiom of choice.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Standard mathematical skills are supposed.

16 / V602E										Tinchev	<a href="http://sofia.bg">sofia.bg</a>
------------	--	--	--	--	--	--	--	--	--	---------	--

Short description of the course (in the language of instruction):

Model theory is a branch of mathematical logic which deals with the connections between the formal languages and its interpretations, the interplay of syntactical and semantical notions. The course is devoted to the 'classical' model theory of first-order predicate logic which is the simplest language of the main body of mathematics. The properties of the classes of classical structures are studied definable by formulas of the first-order predicate logic. Different techniques are presented based on the classical compactness and omitting types, constructions of elementary chains, characterizations of theories, quantifier eliminations and definability, but some applications of ultra-products and Ehrenfeucht-Fraïssé games as well. Some basic ideas from abstract model theory and Lindström's characterization of first-order logic are also presented.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Some basic knowledge on mathematical logic and on set theory.

Dr. Habil

**Short description of the course (in the language of instruction):**

The course “Modal logic” starts with an exposition of intuitionistic and classical propositional logic including axiomatization and completeness theorems. It contains standard material for modal logic: modal languages, Kripke semantics, modal definability and undefinability, Sahlqvist definability theorem, decidability by the method of filtration, axiomatization and completeness via canonical models, extended modal languages. The course is intended for students specializing mathematical logic with applications in computer science and Artificial Intelligence

**Requirements for enrollment: YES/NO**

If any, please describe the specific requirements:

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

MI M 6221 16 / V606E	LOGICS OF SPACE AND TIME: REGION-BASED APPROACH	English	MA	Summer	6	75	0	0	Prof. Dimitar Vakarelov, Dr. Habil	<a href="mailto:dvak@fmi.uni-sofia.bg">dvak@fmi.uni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

In this course we develop theories of space and time based on some spatial relations between regions of space. This approach, known also as Region-based theory of space (RBTS), goes back to Whitehead where the base primitive notion is the notion of spatial region and some relations between regions as “contact”. An algebraic equivalent of this theory is the notion of contact algebra. We consider several models of contact algebras: topological, proximal and relational and representation theorems of contact algebras in the corresponding models. In the second part of the course we introduce the notion of dynamic contact algebra which incorporates the notion of time and formalizes regions changing in time. The theory is point free in double sense: neither spatial points nor time points (moments of time) are taken as primitives – they are definable in the theory by the notion of “dynamic region” and some spatio-temporal relations between dynamic regions: “spatial contact”, “time contact” and “precedence”. The main result of part two is a representation theorem for dynamic contact algebra in certain concrete models of changing regions called “snapshot models”.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements:

MI M 0101 16 / V601E	COMPUTABILITY AND COMPLEXITY	English	BA/MA	Winter	6	45	30	0	Asst. Prof. Stefan Vatev, PhD	<a href="mailto:stefanv@fmi.uni-sofia.bg">stefanv@fmi.uni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course is an introduction to the theory of computability. The considered computational model is based on unlimited register machines. We present the connections between partial computable and partial recursive functions. We consider certain important computable and computably enumerable problems and describe methods for establishing incomputability. The foundations of the theory of computational complexity are presented. We discuss properties of the complexity classes P and NP. We examine certain NP-complete problems and give a proof of Cook's theorem.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Understanding basic concepts of Discrete Mathematics and Mathematical Logic.

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

MI M 2321 16 / R791E	VARIATIONAL METHODS AND APPLICATIONS	English	MA	Summer	6	45	0	30	Assoc. Prof. M. Karatop- raklieva, PhD	<a href="mailto:ivmarkar@fmi.uni-sofia.bg">ivmarkar@fmi. uni-sofia.bg</a>
-------------------------	--	---------	----	--------	---	----	---	----	--	---

Short description of the course (in the language of instruction):

Variational methods are among the techniques for solving the Dirichlet problem for the Poisson equation in the theory of partial differential equations. Having essential applications in investigation of problems of modern mathematics, classical mechanics, fluid mechanics, optics and electromagnetics, those methods have become recently a powerful research tool in such fields as: quantum mechanics, optimization and control, image processing and data analysis, mathematical finance and economics. The course content consists of the following topics: the classical theory of minimization of a quadratic functional in a Hilbert space, an introduction to the differential calculus in a reflexive Banach space and the theory of critical points for a lower semi continuous functional. The examples of application of the theory include: the Brachistochrone problem, Plateau's problem, linear and semi linear elliptic boundary value problems, the nonlinear p-Laplacian and others.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Multi-variable calculus. A background in partial differential equations and functional analysis is not necessary, but helpful.

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

MI M 0101 16 / E781E	ORTHOGONAL POLYNOMIALS AND SPECIAL FUNCTIONS	English	BA/MA	Winter	5	30	0	30	Assoc. Prof. M. Karatop- raklieva, PhD	<a href="mailto:ivmarkar@fmi.uni-sofia.bg">ivmarkar@fmi. uni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course provides an introduction to the study of orthogonal polynomials and special functions. They are related to important problems in approximation theory of functions, the theory of differential and difference equations, whilst having essential applications to recent problems in quantum mechanics, mathematical statistics, computer graphics, digital signal processing. The course will include the topics: Gamma function, the hypergeometric functions and confluent hypergeometric functions - series expansions, analytical and geometrical properties, differential equations, applications in summation and function representations; sequences of orthogonal polynomials and their weight functions; study of the classical orthogonal polynomials and their applications in quantum mechanics, computer graphics and digital signal processing.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Calculus of real and complex variables, differential equations, linear algebra.

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

Short description of the course (in the language of instruction):

The course introduces the main notions and ideas of the FEM. It shows how to apply the FEM to the main classes of stationary and non-stationary differential problems, which are mathematical models of variety of real-world phenomena and processes. As a basis of the laboratory exercises the PDE toolbox of MATLAB will be used. The students will use the Graphical user interface for solving different engineering problems in the fields of electrostatics and magnetostatics, diffusion and transfer (of heat and particles), deformation and stresses in elastic bodies.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Knowledge in the frame of the courses Mathematical analysis, Linear algebra and Numerical methods. One programming language or one of the systems MATLAB and MATHEMATICA.

Short description of the course (in the language of instruction):

Statistics is a way to get information from data, and a tool for creating an understanding from a set of number. Like a branch of statistic, Business Statistics is a science assisting to make business decisions under uncertainties based on some numerical and measurable scales. The main objective of Business Statistics is to make inference about certain characteristics of a population based on information contained in a random sample from the entire population, so the business statistic is the science of good decision making in the face of uncertainty. A typical Business Statistics course is intended for business majors and covers statistical study, descriptive statistics, probability, and the binomial and normal distributions, test of hypotheses and confidence intervals, linear regression, and correlation.

Short description of the course (in the language of instruction):

The course introduces graphs in all their flavors: undirected graphs, directed graphs, multigraphs, and weighted graphs. Numerous fundamental graph concepts are presented: adjacency, incidence, vertex degrees, walks, tours, paths, cycles, Euler tours and Hamilton cycles, trees, spanning trees, graph connectivity, bipartite graphs, vertex and edge colorings, matching, planarity, flows, optimal paths, and planar embedding. An emphasis is placed on the algorithmic aspects of Graph Theory and on its practical aspects. Every significant graph problem is demonstrated as an abstraction of a particular real-life problem. The most fundamental algorithmic problems on graphs are discussed in detail: graph traversal, minimum spanning tree, shortest and longest paths, topological sorting, maximum matching, the edge coloring of bipartite graphs, various transportation problems, the Chinese postman problem, the color ability of planar graphs. Numerous algorithms are presented and analyzed: BFS, DFS, Prim's and Kruskal's algorithms for MST, Dijkstra's algorithm for shortest paths, the construction of Eulerian tours, several max-flow algorithms, algorithms for maximum matchings on bipartite graphs. To that end, the fundamentals of algorithm analysis are presented briefly with emphasis on polynomial-time complexity.

MI C 0101 17 / F653E	FUNDAMENTALS OF ALGORITHMS	English	BA/MA	Winter	5	30	30	0	Assoc. Prof. Minko Markov, PhD	<a href="mailto:minkom@fmi.uni-sofia.bg">minkom@fmi.u ni-sofia.bg</a>

Short description of the course (in the language of instruction):

Further, we introduce the five asymptotic notations  $O$ ,  $o$ ,  $\Theta$ ,  $\Omega$ ,  $\omega$ . We consider SORTING as a fundamental computational problem and present both naïve and sophisticated algorithms for it. In doing so, we introduce binary heaps and priority queues, as well as the Divide-and-Conquer paradigm, recursive algorithms, recurrent relations and methods for solving them. We introduce the concept of lower bounds on computational problems and methods for proving lower bounds. We consider numerous Graph Theory computational problems: graph

traversal, topological sorting, cut vertices, minimum spanning trees and shortest paths. We introduce the Greedy paradigm and the Dynamic Programming paradigm, illustrating the latter with numerous examples. We introduce the basics of Computational Complexity and the phenomenon of intractability.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: A course in Discrete Mathematics.

MI B 0101 16 / H766E	PROJECT MANAGEMENT	English	BA/MA	Winter	5	30	30	0	Prof. K. Kaloyanova, PhD	<a href="mailto:kkaloyanova@fmi.uni-sofia.bg">kkaloyanova@f mi.uni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course covers all operational and organizational aspects of project management, namely scope, time, cost, quality, human resources, communication, risk, procurement, stakeholders. Multiple learning formats are used throughout the course, including lectures, practice sessions, homework assignments and classroom presentations. The lectures cover the main aspects of project management following the PMBOK including all process groups and their interactions. During practice sessions students develop real-life PM work products. Homework

assignments are performed in an intensive group work environment. Results of the group work are discussed and presented in a predefined format. The learning process includes implementation of various project management practices and techniques.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Basic knowledge in programming and software processes.

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

Short description of the course (in the language of instruction):

The course introduces to the students the main concepts, problems and methods of Computational Intelligence (CI). We examine certain classical directions of CI: search algorithms, knowledge representation, communication via a limited natural language, action planning, computational self-learning and knowledge acquisition, image recognition, etc. The foundations of the connectionist approach in CI are also given. At seminars we examine example programs, illustrating the main algorithms for solving problems in part of the mentioned directions.

**Requirements for enrollment: YES/NO**

**If any, please describe the specific requirements: Basic knowledge in object-oriented programming, data structures, discrete structures, logic programming, probability theory and mathematical statistics.**

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail
						Lectures	Exercise s/Semin	Practica l work		
MI B 0101 16 / F726E	CLOUD COMPUTING AND TECHNOLOGIES	English	BA	Summer	5	30	30	0	Asst. Prof. Eng. Galia Novakova, PhD	<a href="mailto:g.novak@fmi.uni-sofia.bg">g.novak@fmi.u ni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

**The purpose of this course is to introduce Cloud computing-related technology topics in a manner that is accessible to bachelor students as well as to empower participants with an understanding of the fundamental mechanics of a cloud platform, how the different “moving parts” can be combined, and how to address common threats and pitfalls.**

**Requirements for enrollment: YES/NO**

**If any, please describe the specific requirements:**

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

MI I 63 21 16 / S557E	SUPPLY CHAIN MANAGEMENT (SCM)	English	MA	Winter/ Summer	5	30	30	0	Asst. Prof. Eng. Galia Novakova, PhD	<a href="mailto:g.novak@fmi.uni-sofia.bg">g.novak@fmi.u ni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

**This course covers the basic concepts of planning and control of material flow into, within and outside the organization. Besides, it deals with the fundamental relationships between different kind of activities in the supply chain from suppliers of raw materials to the final client as well as with a management approach for integration of the supply chain; Supply Chain Operational Reference Model – SCOR, benchmarking, the Value Chain Management, VCOR Model. Readings include designated chapters, a case, and one supplementary article. We will also explore Web sites and other material as it becomes available. The cases and articles were selected to develop issues to match the program. A term project is expected from every student. The course on SCM complements and builds on the knowledge and skills acquired in training and**

practice. Teaching this course provides preparation of powerful human potential of quality professionals with a good scientific and practical training. The program is designed specifically for students in graduate programs or specialists who will gain the knowledge and experience to improve the competitiveness of organizations through various approaches, and will learn.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements:

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

MI I 63 21 16 / S517E	QUALITY MANAGEMENT IN THE SOFTWARE DEVELOPMENT LIFE- CYCLE	English	MA	Winter/ Summer	5	30	30	0	Asst. Prof. Eng. Galia Novakova, PhD	<a href="mailto:g.novak@fmi.uni-sofia.bg">g.novak@fmi.u ni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course "Quality Management in the Software Development Life-Cycle (SDLC)" covers basic ideas, views and major trends on the concept of quality in the development life cycle and maintenance of software.

Furthermore, it considers the definition of software product quality according to ISO 9126 and IEEE Std 729 standards and models for software quality evaluation, use of quality software metrics; cost of software product quality; multi-criteria approach, statistical and probabilistic methods and Bayesian approach for software quality evaluation.

In addition, this course covers the use of fuzzy logic and fuzzy values in the evaluation of software quality; methods of classification and clustering for evaluation of software product quality.

The program is designed specifically for students in graduate programs or experts who would like to obtain additional knowledge and experience to improve the quality of software products.

Input and output connections: it completes and builds on the knowledge and skills acquired in training and practice.

Course organization: lectures, seminars.

- Part of the presentations will be developed and presented by the students themselves, which will also help them to develop presentation skills.

Management & form of control: test

- There are two intermediate tests as an essential part of the final grade of the course.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: It is only necessary to have a basic knowledge in the field of quality and information technology.

This course is designed for:

- professionals (bachelors and experts) graduated in mathematics and informatics, computer science or applied mathematics at FMI (Sofia University) or related disciplines in other universities).
- non-specialists: bachelors degree in other disciplines.

Short description of the course (in the language of instruction):

The SDLC course aims at strengthening the knowledge of Master students on required concepts and methods for large software systems development. It will provide new knowledge on processes and techniques related to development of complex software systems. Additional aim is broad understanding of software engineering discipline.

The students will have lectures and seminars, also will prepare critical analyses and essays on given subjects.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Basic programming skills

Course code	Course title (in English)	Language of instruction	Course offered to BA/BS, MA/MS, PhD	Semester	ECTS	Number of hours			Lecturer/s's name	Lecturer/s's E-mail

Short description of the course (in the language of instruction):

The course covers scientific foundations for software engineering based on the use of precise, abstract models for characterizing and reasoning about properties of software systems. This course considers many of the standard models for formal representation of sequential and concurrent systems. The models are based on paradigms such as state machines, algebras, and traces. The course shows how different logics can be used to specify properties of the software systems. Concepts such as composition mechanisms, abstraction, relations, invariants, non-determinism, inductive definitions and denotational descriptions are building themes throughout the course.

The course gives an opportunity to acquire practical skills through elaboration of practical tasks using specific notation.

Requirements for enrollment: YES/NO

Short description of the course (in the language of instruction):

Main goal of the course is to provide students with insights on how web-based frameworks are constructed, upgrading knowledge and skills from course "Network Programming with Java" and to create fundamental knowledge on web programming with Java and JSF framework.

Students will use contemporary achievements in Java technologies (JavaEE7 or newer) and JSF2+ framework. It is assumed that technologies as Servlet and JSP are familiar to the students. Components of JavaEE – such as web and application servers, java beans, internationalization and localization, MVC architecture, lifecycle of web application development. Development of convertors, validators and custom messages. Internal and external support of Ajax. Working with database (JDBC4).

Requirements for enrollment: YES/NO

If any, please describe the specific requirements:

1. Course “Object-oriented programming with Java” is required (or knowledge of OOP concepts in Java) ,
2. Course “Network programming with Java” is recommended

MI I 34 21 16 / Y537E	ARCHITECTURES OF SOFTWARE INTENSIVE SYSTEMS	English	MA	Summer	5	30	15	15	Assoc. Prof. A. Dimov, PhD	<a href="mailto:aldi@fmi.uni-sofia.bg">aldi@fmi.uni-sofia.bg</a>

Short description of the course (in the language of instruction):

Software architecture results from the design phase of software development process. It focuses on different views of the software system. A view represents a configuration of abstract elements (e.g. modules, layers, processes, etc.) and the interconnections between them, while removing details, like algorithms and source code.

The role of software architecture in the major activities of software engineering is explored, including application conception, design, implementation, and analysis. An architecture-centric perspective on development is explored in this course.

The course explores the conceptions of effective analysis, design, concepts and practices of software architectures. The main building elements – components and connectors are analyzed as well as common issues of analysis and design, evaluation techniques and standards are explored. We do assume that the students and visitors are generally familiar with the most basic elements of software engineering and programming. As well as this course will be appropriate for professionals in software design and development. This course will be useful for software engineers as well and will help them to have a closer look on advanced ideas in software development process, software architecture frameworks and software architecture as a backbone of the qualify software.

Expected results: After successful course completion, the participants will be able to: Explain and reason about the notion of software architecture Analyze and refine quality requirements on software systems Design and document software architectures Understand and use in practice different architectural styles Will have preliminary knowledge about different options to analyze and evaluate software architectures and design decisions

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Knowledge on programming languages, data structures, algorithms and object-oriented design.

Short description of the course (in the language of instruction):

This course has been put together by the Intel and Berkeley University to provide students with a high-level survey of the field of Entrepreneurship. The course provides students perspectives by prominent entrepreneurs from organizations at various stages of development and representing a broad range of industries and topics. Entrepreneurs speak on how they created their organizations and the lessons they learned. This course is for both aspiring entrepreneurs as well as those simply interested in learning more about the field. It does not teach you how to be an entrepreneur, but it aims to inspire you and give you a perspective on what life as an entrepreneur is like. If you hope to start a company this course will help to prepare to fully-utilize the resources available at Berkeley and maximize your potential for success. At the end of this lecture series you will have a broad understanding of entrepreneurship and how entrepreneurship happens on campus.

Requirements for enrollment: YES/NO

Short description of the course (in the language of instruction):

Junior Achievement programs help prepare young people for the real world by showing them how to generate wealth and effectively manage it, how to create jobs which make their communities more robust, and how to apply entrepreneurial thinking to the workplace. Students put these lessons into action and learn the value of contributing to their communities. JA Innovation and Entrepreneurship, a new high school program, focuses on challenging students, through interactive classroom activities, to start their own entrepreneurial venture while still in high

school. One of ten JA programs designed with the specific needs of upper grade students in mind, JA Be Entrepreneurial provides useful, practical content to assist students to transition into becoming productive, contributing members of society.

The purpose of the practical course “Student company” is to introduce students with the basics of entrepreneurship in order to build skills for starting their own business. In theory classes there will be presented main features for organization and management of real student company. Students are introduced to basic management skills and organizational functions. During the classes, students register a student company – Joint Stock Company, realize real product or service and realize financial profit. The student company has about 8 members and all students have signed roles and positions. The course is part of the international initiative ”Junior Achievement”, and student companies compete on local and international competitions.

**Short description of the course (in the language of instruction):**

The goal of this course is to introduce to the student the fundamental networking concepts and technologies. The online course materials will assist students in developing the skills necessary to plan and implement small networks across a range of applications. The specific skills covered in each chapter are mastered through the applied tasks and cases.

The principles of IP addressing and fundamentals of Ethernet concepts, media, and operations are introduced to provide a foundation for the curriculum.

By the end of the course, students will be able to build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes.

MI I 63 21 16 / S519E	FINANCIAL MANAGEMENT OF ICT COMPANY	English	MA	Winter	5	30	30	0	Assoc. Prof. Altin Idrizi, PhD	<a href="mailto:altinidrizi@yahoo.com">altinidrizi@yahoo.com</a>

**Short description of the course (in the language of instruction):**

The focus of this course is in the area of financial management. We will show managers how to interface with accounting and finance departments; help them to understand how IT firms meet their financial objectives utilizing financial decision-making. This course will also explain financial tools and techniques, which can be used to help IT firms maximize value by improving decisions relating to capital budgeting, capital structure, and working capital management. This course will deal with a number of related topics, including multinational financial management, risk management, mergers and acquisitions.

**Requirements for enrollment: YES/NO**

MI I 63 21 16 / 5619E	PROJECT MANAGEMENT (PM)	English	MA	Winter	5	30	30	0	Assoc. Prof. K. Spasov, PhD	<a href="mailto:kspasov@fmi.uni-sofia.bg">kspasov@fmi.uni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

**Project Management is the art of 'getting things done.' This project management course will focus specifically on software related projects. It will introduce project management from the standpoint of a manager who must organize, plan, implement, and control tasks to achieve an organization's schedule, budget, and performance objectives.**

**Tools and concepts such as project charter, scope statement, work breakdown structure, project estimating, and scheduling methodologies are studied.**

**What is a project? How do you manage one? What is the best approach? We'll answer those questions and many more in the weeks to come. This is an opportunity to learn the project management fundamentals that can guide a project through a maze of challenges to successful completion!**

**Successful projects do not occur by luck or by chance. In fact, many projects do not achieve their organization's goals!**

**Project management is often challenging and difficult to execute. Many people do not possess the personal qualities and leadership potential to lead project teams to successful completion. However, it is refreshing to know that the understanding for the project management lifecycle, as well as the tools, techniques, and necessary documents to be created can be learnt through course study by anyone wishing to do so.**

**Requirements for enrollment: YES/NO**

MI I 63 26 17 / S629E	SALES AND MARKETING AT AN ICT COMPANY	English	MA	Summer	5	30	30	0	Assoc. Prof. V. Slantcheva- Baneva, PhD	<a href="mailto:kspasov@fmi.uni-sofia.bg">kspasov@fmi.u ni-sofia.bg</a>

**Short description of the course (in the language of instruction):**

**Sales and Marketing at IT Company is designed as an introduction to the theory and practice of selling and marketing in a determined IT context. Students will establish an ability to suggest relevant marketing approaches and assess market opportunities, as well as to design an experience of going through core processes of segmentation, targeting and positioning. From the perspective of "sales", is built on analysing, designing and managing a sale. In addition, students will have the opportunity to communicate and defend their recommendations and build upon the recommendations of their peers. The course explores the principles and applications of sales and marketing concepts through a mix of lectures, guest speakers, cases, and individual or team assignments.**

Short description of the course (in the language of instruction):

The purpose of the course is to introduce students to the basic principles of Customer Relationship Management (CRM). Customer relationship management is a combination of business strategy and operational activities to identify, attract, retain and develop customers yielding high profits through effective and efficient management of the customer's life cycle. During the course students learn how to gather, store and process data and information about customers from different sources inside and outside the organization. They acquire hands on experience using CRM in marketing, sales and customer service.

Short description of the course (in the language of instruction):

Electronic business is hard to imagine without of electronic payments. Understanding of the operation of payment systems, proper use of payment instruments in different types of payments - national, international, mobile, inter-company or to end customers is a key success factor. During the course students will learn main concepts in payments, billing, payment instruments, payment systems and existing risks in payment systems – conventional and electronic. Particular attention is given to the current payment instruments such as credit cards, electronic checks, electronic wallets, electronic wallets and trending technologies for electronic payments based on mobile, RFID and NFC communications.

**Short description of the course (in the language of instruction):**

The program of the course combines the capabilities of information and communication technologies and management strategies of commercial operations and transactions. It presents the students the basics of e-business, e-commerce standards and technologies for its realization. The focus is on the usage of ICT in the companies as well on how to use the technologies to build successful businesses and operations. Different aspects like build vs. buy, open source vs. proprietary software, outsource vs. on the spot, ROI of implementation of business applications, etc., are discussed.

**Requirements for enrollment: YES/NO**

Short description of the course (in the language of instruction):

The course is focused on the requirements for ensuring the security of modern electronic systems. Description of the major tools used, the challenges and threats related to e-business is argued. Discussed are issues related to ensuring the security of users and providers of electronic services with special attention to the requirements for building a secure and reliable infrastructure to meet modern security requirements. An overview of standards for Information security and ensuring the availability of services such as ITIL, ISO 20000, ISO 27000 is included.

Requirements for enrollment: YES/NO

Short description of the course (in the language of instruction):

The aim of the course is to acquaint students with the basic problems of human relations in organizations and methods for analyzing and overcoming them. These problems manifest themselves both individual and group, and organizational levels and their deeper understanding

requires a combination of knowledge and methods from psychology, sociology and organizational theory.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements:

MI I 40 21 17 / H776E	PROJECT RISK MANAGEMENT	English	MA	Winter	5	30	15	15	Chief Assist. Prof. Ioannis Patias, PhD	<a href="mailto:patias@fmi.uni-sofia.bg">patias@fmi.uni-sofia.bg</a>

Short description of the course (in the language of instruction):

The course covers different aspects of project risk management. The lectures cover the main concepts of project management following the PMI methodology. The student understands the basics of project risk identification, analysis, assessment, and management. The course devotes significant time to the Project Management Institute's PMBOK methodology for project risk management.

The project assignment aims to provide the student with the opportunity to work on real life problem, and apply the methodology learned in real situations.

Students passed successfully the course will have

- Knowledge about the project risk management concepts, methods and frameworks;
- Practical skills for project risk management PMI's methodology.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Basic knowledge in project management

MI I 40 21 17 / H786E	DESIGN OF ROBOTICS SYSTEMS	English	MA	Winter	5	30	15	15	Chief Assist. Prof. Ioannis Patias, PhD	<a href="mailto:patias@fmi.uni-sofia.bg">patias@fmi.uni-sofia.bg</a>

Short description of the course (in the language of instruction):

Robotics has several specific requirements in terms of design. Each robotic system requires tight integration of planning, sensor subsystems for monitoring, control and modeling, and the robot must take into account the interactions between themselves and their environment to operate in resolving its task. The more intelligent robot more stable is to be a complete system against deviations that may arise. In other words, one

such robotic system consisting of subsystems, where many of the subsystems are not even under direct control of the robot itself as subsystems contain agents that have their own behavior.

The aim of this course is to develop the quality of students in building real applications of embedded systems, which systems are expected to constitute an essential element of many applications.

The program focuses on basic tools and their application to solve real problems.

Through lectures, case studies, exercises, test examples and tasks students will acquire both basic knowledge and understanding of the key factors for successful implementation of applications of embedded systems.

Within the course project, students will have to demonstrate practical skills through the realization of a working example of the application of embedded system.

As a result, students will be able to handle cases related to the implementation of complex projects related to the applications of embedded systems.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Basic knowledge in Embedded and Autonomous Systems

MI I 39 21 18/Y4589E	INTRODUCTION TO ARTIFICIAL INTELLIGENCE	English	MA	Summer	5	30		30	Prof. Ivan Koychev PhD	<a href="mailto:koychev@fmi.uni-sofia.bg">koychev@fmi.u ni-sofia.bg</a>

Short description of the course (in the language of instruction):

The goal of this class is to familiarize the students with the basic principles of Artificial Intelligence (AI). The course provides a survey of AI techniques and underlying theory. The students will learn some basic AI techniques, the problems for which they are applicable, and their limitations. Topics covered include basic search, heuristic search, game search, constraint satisfaction, knowledge representation, expert systems, probabilistic modelling, including machine learning and natural language processing. This course provides a useful foundation for courses on specific topics of AI and its applications, which become quite widespread last decade.

Requirements for enrollment: YES/NO

If any, please describe the specific requirements: Basics on data structures and algorithms and programming skills.

18/Y569E	DISCOVERY IN DATA									Koychev PhD	<a href="http://ni-sofia.bg">ni-sofia.bg</a>
<p><b>Short description of the course (in the language of instruction):</b></p> <p><b>Data Mining studies algorithms and computational paradigms that allow computers to find patterns and regularities in data; perform prediction and forecasting. It is currently regarded as the key element of a more general process called Knowledge Discovery (KD) that deals with extracting useful knowledge from raw data. The knowledge discovery process includes data selection, cleaning, coding, using different statistical and machine learning techniques, and visualization of the generated structures. The course will cover all these issues and will illustrate the whole process by examples. Special emphasis will be given to the Machine Learning methods as they provide the real knowledge discovery tools. Important recent technologies also will be discussed. The students will use recent Data Mining software and prepare a course project.</b></p>											
<p><b>Requirements for enrollment: <u>YES/NO</u></b></p> <p><b>If any, please describe the specific requirements: Basics on search algorithms and programming skills.</b></p>
